## **UKAEA Ltd celebrates successful first year**

UKAEA Ltd celebrated its first year of trading today.

Since its formation on 1 April 2008, UKAEA Ltd has continued to build on its excellent reputation in nuclear decommissioning and consulting, securing a broadening range of new contracts in the UK and international markets. These include a major contract to support SOGIN, the Italian decommissioning company, and a key Programme Management support contract for ITER, the international fusion project at Cadarache in France.

In a first year full of progress, the company further established itself as a Parent Body Organisation (PBO), recently adding responsibility for the management of Harwell and Winfrith as Research Sites Restoration Ltd (RSRL) to its management of the Dounreay site, on behalf of the Nuclear Decommissioning Authority.

UKAEA specialises in nuclear decommissioning, waste management and nuclear new build support services and provides consultancy support to clients to mitigate risks, eliminate uncertainties and reduce costs in their nuclear challenges and projects.

CEO Norman Harrison said, "This year's success reflects not only the skills and expertise developed over UKAEA's history but also the commitment, innovative approach and unstinting hard work of our growing workforce. Now we will maintain the momentum we have created and build on this."

UKAEA's success has required the company to expand its workforce, located across five UK offices, to provide a sound basis for planned continued growth in 2009/10.
